PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No.	Applicant(s)	
	09/647,332	GONNO ET AL.	
	Examiner	Art Unit	
	Joseph G. Ustaris	2623	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 18 July 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-3 and 5-7 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-3 and 5-7 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on June 19, 2007 has been entered.

Claim Objections

2. Claim 1 is objected to because of the following informalities: Claim 1 on line 15 recite "segmentation data" while the rest of the claims refer to "segmentation information". The examiner suggests that applicant be consistent in the language used within the claims. Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-3 and 5-7 are rejected under 35 U.S.C. 102(e) as being anticipated by Wang (US006675385B1).

Regarding claim 1, Wang discloses a transmitting apparatus for transmitting contents data and corresponding meta data over a network (e.g. MPEG digital television network) (See Fig. 1; column 2 line 29).

The system includes: contents storing means (e.g. local database) for storing contents data (e.g. EPG data) and corresponding meta data (wherein the EPG data includes meta data, e.g. title, channel information, start time, and stop time of various programs) in a broadcast format (e.g. the format it is received in) (See Fig. 4; column 2 lines 55-61 and column 3 lines 55-61);

meta data schema storing means (e.g. the system generates HTML web pages of the EPG and stores the pages) for storing a meta data schema (e.g. the HTML) defining a data structure for the meta data that is compatible with a network transmission format (e.g. the HTML web pages of the EPG are compatible with the MPEG-2 transport stream) (See Fig. 4; column 3 line 62 – column 4 line 8, column 5 lines 5-10).

In order to generate the HTML web pages of the EPG, the system further includes: contents segmenting means (e.g. the EPG manager of the system generates sets of Web pages based on the EPG data) for segmenting the contents data (e.g. EPG data) and generating segmentation information (e.g. assigning each Web page a universal resource locator (URL)) of the contents data (See column 3 lines 62-66),

meta data combining means (e.g. the EPG manager combines the meta data and the URLs into the web pages and then are stored) for combining the corresponding meta data and segmentation information (e.g. URLs) for the segmented contents data (e.g. the HTML web pages) (See Fig. 4; column 3 line 62 – column 4 line 8, column 5 lines 5-10).

In order to transmit the HTML web pages of the EPG over the network, the system also includes: contents converting means (e.g. the HTML web pages of the EPG are encoded into a MPEG-2 transport stream by the MPEG-2 encoder) for converting the segmented contents data (e.g. the HTML web pages of the EPG) into the network transmission format (e.g. MPEG-2 format) (See Fig. 1; column 1 lines 24-35, column 3 lines 55-61, and column 4 lines 9-15);

meta data converting means (e.g. the data streamer and MPEG-2 encoder) for converting the meta data (e.g. from the EPG data) and segmentation data (e.g. URLs) from the broadcast format (e.g. the format the EPG data is received in) into the network transmission format (e.g. MPEG-2 format) (See Fig. 1; column 1 lines 24-35, column 3 lines 55-61, and column 4 lines 9-15), wherein said meta data converting means converts the meta data (e.g. from the EPG data) with the segmentation information (e.g. the URLs) and represents the meta data with the segmentation information in a descriptor format (e.g. data packets represented by PIDs) of an MPEG system section (e.g. the data packets are in accordance with the MPEG-2 standard) (See col. 4 lines 9-30);

meta data schema converting means (e.g. the MPEG-2 encoder) for converting the meta data schema (e.g. the HTML) into the network transmission format (e.g. MPEG-2 format) (See Fig. 1; column 1 lines 24-35, column 3 lines 55-61, and column 4 lines 9-15);

transmitting means for transmitting the converted meta data and segmentation information, the converter meta data schema, and the converted contents data in the network transmission format (e.g. MPEG-2 format) over the network (See Figs. 1-3).

Claim 2 contains the limitations of claim 1 and is analyzed as previously discussed with respect to that claim. Furthermore, the URLs also serve as the “identifier of the segmentation information”, wherein it identifies all the web pages of the EPG that includes the “meta data”. The URLs are assigned and stored with the web pages or “segmentation information storing means” as discussed above. The URLs are also encoded or “converted” or “segmentation information converting means” and transmitted down to the user over the network.

Regarding claim 3, the HTML web pages of the EPG are encoded or “converted” into an MPEG-2 transport stream or “represents the meta data schema in an MPEG system section format” (See column 4 lines 9-23).

Regarding claim 5, Wang also discloses a system for receiving HTML web pages of the EPG in an MPEG digital TV system or “network”. The set top box (STB) receives the HTML web pages of the EPG or “segmented contents data” that includes the “meta data” and URLs or “segmentation information”, wherein the web pages are defined by HTML or “meta data schema” over the network (See Fig. 1). The HTML web pages are

stored in memory or “meta data schema storing means” or “meta data storing means” (See Fig. 1 and 3; column 4 lines 41-50). The web browser of the STB performs the functions of the “meta data analyzing means” where it parses, layouts, and renders the HTML web pages of the EPG and the “contents reproduction controlling means” where it displays the HTML web pages of the EPG that includes the URL links to other web pages and the “meta data” as defined by the HTML (See Figs. 3-9). Furthermore, the meta data includes electronic program guide data converted for transmission from a broadcast transmission format (e.g. the format the EPG data is received in) into the network transmission format (e.g. MPEG-2 format) (See Fig. 1; column 1 lines 24-35, column 3 lines 55-61, and column 4 lines 9-15), and wherein said meta data (e.g. from the EPG data) with said segmentation information (e.g. the URLs) is represented in a descriptor format (e.g. data packets represented by PIDs) of an MPEG system section (e.g. the data packets are in accordance with the MPEG-2 standard) (See col. 4 lines 9-30).

Claim 6 contains the limitations of claims 1 and 5 and is analyzed as previously discussed with respect to those claims. Furthermore, the URLs also serve as the “identifier” to the “segmentation information”, wherein the URLs identifies and links all the web pages of the EPG that includes the “meta data”. The URLs are assigned and stored with the web pages or “segmentation information storing means” as discussed above in claim 5. The web browser of the STB performs the functions of the “meta data analyzing means” where it parses, layouts, and renders the HTML web pages of the EPG according to the HTML, where it places the “meta data” in the corresponding

location on the web pages as well as placing the URL links to other web pages in the corresponding location on the web pages or “analyzing the stored meta data on the basis of the meta data schema, and the stored segmentation information on the basis of the identifier” (See Fig. 3-9).

Claim 7 contains the limitations of claims 2 and 3 and is analyzed as previously discussed with respect to those claims.

Response to Arguments

4. Applicant's arguments filed June 19, 2007 have been fully considered but they are not persuasive.

Applicant argues with respect to claims 1-3 and 5-7 that Wang does not disclose that the meta data converting means converts the meta data with the segmentation information and represents the meta data with the segmentation information in a descriptor format of an MPEG system section. However, reading the claims in the broadest sense, Wang does meet that limitation in the claims. Wang discloses segmenting the EPG data (wherein the EPG data includes meta data, e.g. title, channel information, start time, and stop time of various programs; See Fig. 4) into sets of Web pages, where each web page is assigned a URL or segmentation information (See column 3 lines 62-66). The meta data converting means (the data streamer and MPEG-2 encoder; See Fig. 1) converts the meta data (e.g. from the EPG data) with the segmentation information (e.g. the URLs) and represents the meta data with the segmentation information in a descriptor format (e.g. data packets represented by PIDs)

of an MPEG system section (e.g. the data packets are in accordance with the MPEG-2 standard) (See col. 4 lines 9-30). This enables the system to be able to locate any of the web pages within the MPEG-2 stream of data packets.

Applicant is reminded that although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph G. Ustaris whose telephone number is 571-272-7383. The examiner can normally be reached on M-F 7:30-5 PM; Alternate Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christopher S. Kelley can be reached on 571-272-7331. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
